

Proven solutions for your interconnective needs.

With over 30 years of in-house design and engineering experience, Connective Design continues to offer you prompt economical solutions for your interconnective needs.

Our president and founder, **Danya Chandler**, started in the industry over 20 years ago with a passion for serving customers and giving them a better product for a better price. She formed Connective Design in 1991 with this vision in mind. Today, CDI proudly provides custom alternative solutions for aerospace, automotive, ground support and entertainment industries with the shortest lead time available.

Quality design in form, fit and function.

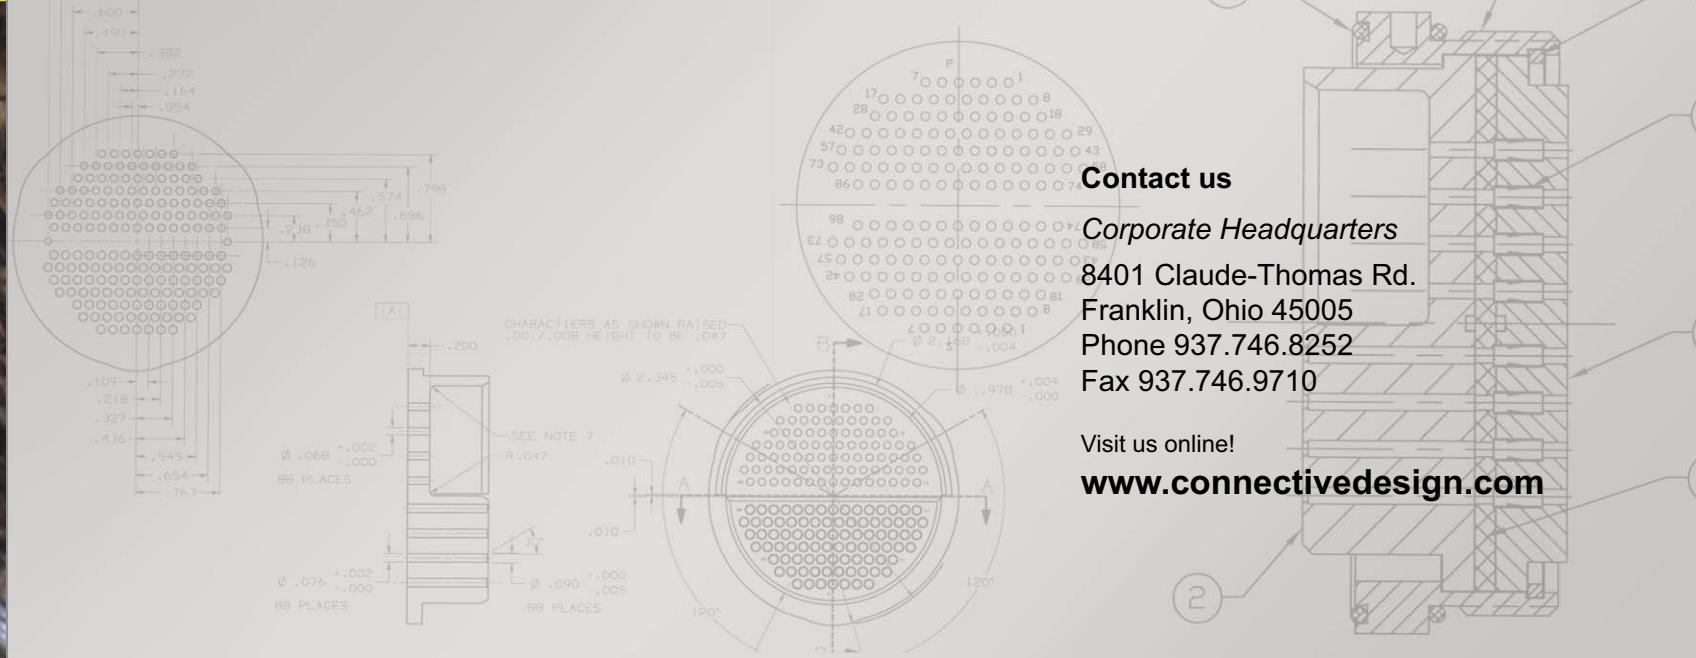

From prototype to final assembly, all members of the CDI organization are committed to consistently meet or exceed customer expectations in products performance, dependability and service. We promote innovative continual improvement and quality assurance backed by **ISO9001:2000**, including inspection, documentation, traceability, testing and all applicable certifications.

We're so committed to this philosophy of business, we've incorporated it in our name:

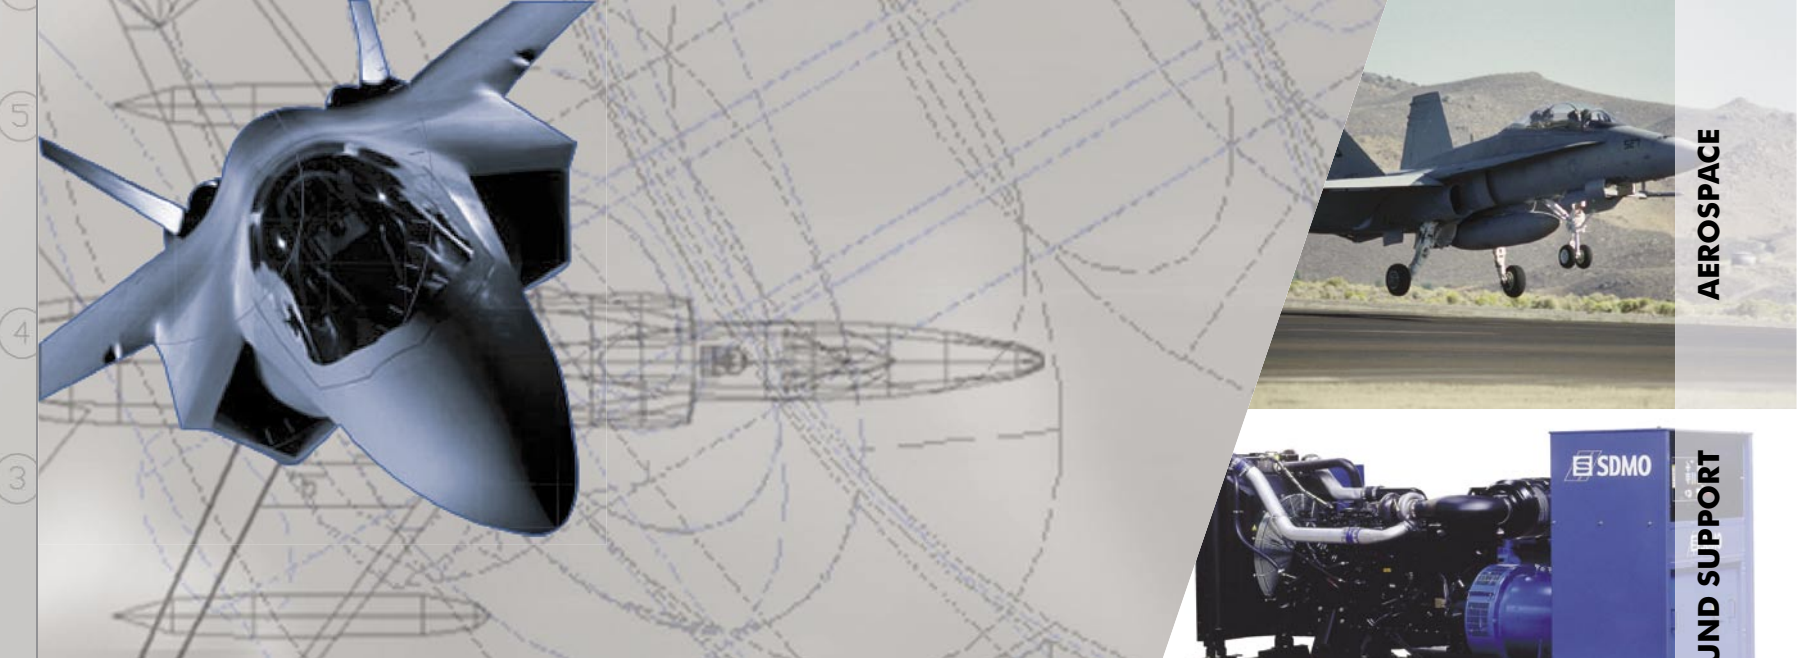

Customer Commitment, Dependability and Innovation. CDI.

"The hustle and hard work from the people at Connective Design played a bigger part in our success than you may be able to imagine. Their timely contributions were absolutely critical."
-Smiths Aerospace

"We consider CDI to be a reliable and strong supplier for any company who cares about reducing their costs."
-Boeing

State-of-art,
from custom design to final assembly.

30
years
of experience

In the aerospace industry, our history precedes us. Connective Design, Inc. leads the way in efficient engineering, by providing customized, high quality designs that surpass the life of the aircraft. All our products undergo stringent testing to operate in the harshest of environments. We understand your situation is time-sensitive, that's why we respond with the shortest lead time in the industry. From design to distribution. Per your specifications.

If your product is old or obsolete, our team of experts can reverse-engineer the product to support your application. Not only do we recreate the part, we improve it. For example, we reverse-engineered obsolete products like the R2901 annunciator and RPM indicator for Airborne Express' fleets at cost savings, while at the same time making the aircraft lighter, more durable and state-of-the-art. Proving our reliability, this fleet experienced little "down" time, increasing flight hours from 400 hours to over 100,000. CDI will do the same for you.

Reverse engineering reinventing success.

Connective Design, Inc. affords customers convenient, innovative product solutions for ground support needs. Our connectors are durable, field-proven and environmentally resistant developed to meet numerous severe applications: portable refrigeration units, lighting shelters, heat-pumps, power generators and transportable communication shelters. Tested in our in-house laboratories, we design our products to withstand the elements.

We're continually improving our products, at cost savings from the original!

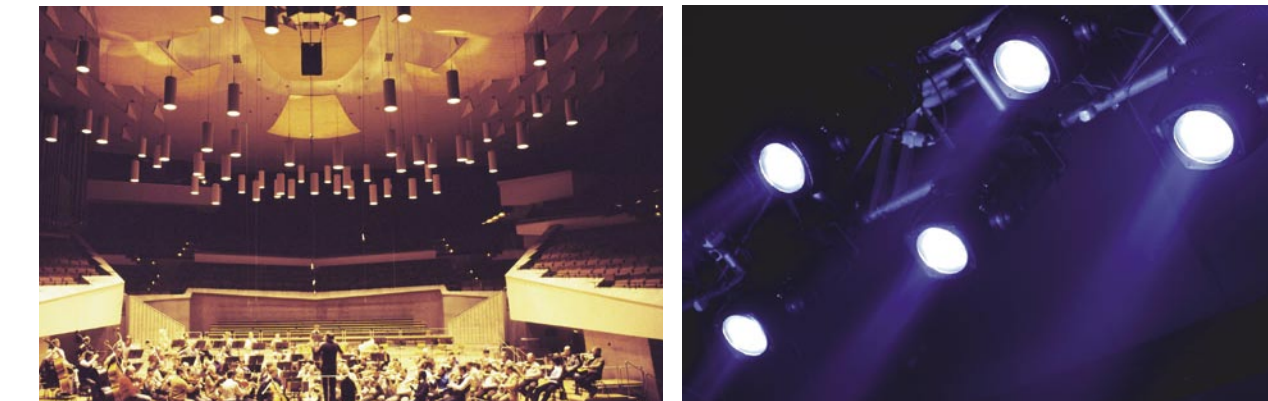

Improving internal processes,
saving clients time and money.

Connective Design, Inc. has extensive capabilities within the automotive industry. We offer alternative product options, true to the original form. CDI specializes in reverse engineering, where we dismantle an old or obsolete product and rebuild it with quality hardware and technological upgrades. For mass orders, our manufacturing facility has high volume automation capability, with the potential to produce thousands of kitting assemblies within a limited timeframe. With any in-stock product, we offer same-day delivery. Our unrivaled turn-around time attracts clients like Ford and GE transportation, now return customers. Supplying filter connectors, power converters, wiring harnesses, printer circuit boards, populating boards and more - CDI remains your source for high-quality interconnective products at an incredible value.

Quick turnaround
& unmatched customer service.

Connective Design Inc., supports all types of entertainment industry needs: lighting, sound, equipment. When we rebuild and upgrade obsolete products, we improve your internal processes as well! We carry a vast inventory to meet JIT requirements, including Hermaphroditic connectors and Litton Veam connector equivalents. With our cost-effective pricing and custom design options, you'll be considered the star of the show!
